NAV calculation for regular and single premiums:

Unit price: A unit in each fund has its own price called

the net asset value (NAV). The NAV of each fund is calculated on daily basis with the following formula:

When appropriation (purchasing) price is applied

$$\text{NAV} = (\text{Market value of investment} + \text{Expense incurred in the purchase of the assets} + \text{Current assets} + \text{Accrued income net of fund management charges} - \text{Current liabilities} - \text{Provisions}) / \text{Number of units outstanding (before any new units are allocated)}$$

When expropriation (selling) price is applied

$$\text{NAV} = (\text{Market value of investment} - \text{Expense incurred in the sale of the assets} + \text{Current assets} + \text{Accrued income net of fund management charges} - \text{Current liabilities} - \text{Provisions}) / \text{Number of units outstanding (before any units are redeemed)}$$

In respect of premiums received up to 3.00 p.m. under a local cheque or a demand draft payable at par or by way of cash, the closing NAV of the day on which the premium is received shall be applicable. In respect of premiums received after 3.00 p.m., the closing NAV of the next business day shall be applicable.

In respect of premiums received under outstation cheques / demand drafts, the closing NAV of the day on which the cheques / demand draft is realised shall be applicable.

All requests for switches, redirection, surrender or partial withdrawal received up to 3.00 p.m. will be processed at the closing NAV of the day on which the request is received. All such requests received after 3.00 p.m. will be processed at the closing NAV of the next business day.
